

Residential R.O. Systems provide you with fresh tasting, enhanced quality, and crystal clear water.

Why do you need a Reo-Pure R.O. System?

Water is a basic necessity of life. Today, safety and taste are two of the main reasons people are turning to alternative water supplies. Despite the fact that "Drinking Water" is essential to our daily lives, little information is available to you, the consumer, about how to ensure yourself of adequate sources of safe, good tasting drinking water.

The *Reo-Pure* R.O. System offers you and your family water that is fresh tasting, clear, and has enhanced quality.

These units are more affordable than bottled water and, in addition, you have the convenience of great tasting drinking water at your fingertips.

The Reo-Pure EC Series R.O. System

Reo-Pure has been a well known leader in the water purification industry for the past 30 years. Our systems are in operation all over the world.

Every Reo-Pure EC R.O. System is equipped with a steel storage tank, chrome long reach faucet, and all necessary components required for a fast and easy installation.

- Enjoy fresher tasting drinking water.
- Ideal for low sodium diets.
- Great for pets and plants.
- Fits right under your sink.
- No more expensive, heavy bottles.
- Models available to fit any application.

Water is essential to the human body!

Over 70% of the human body is made of water, and it requires replenishing every day. To help keep your body in good health, experts recommend drinking eight glasses of water a day. Isn't it important that the water you are drinking be the best it can be?

Ordinary tap water may appear to be clean, but can still contain undesirable substances such as chlorine and taste and odor problems.

Reverse Osmosis is the process used by major water and beverage bottling companies to reduce these undesirables. The reverse osmosis process is considered to be one of the greatest technological breakthroughs, because it can process water at a molecular level. Tap water is forced through a semi-permeable membrane and water molecules are separated from impurities. The rejected impurities are rinsed down the drain and the filtered water goes to the storage tank ready to deliver delicious tasting water right at your fingertips!

PROVED

BY THE

STATE OF

EC Series 3-Stage Unit

Reo-Pure R.O. Systems are easy to install and inexpensive to maintain. Regular maintenance and filter changes will extend the life of your membrane element, and keep your system providing great tasting water for years to come.

Reo-Pure R.O. Systems should not be used where the water is microbiologically unsafe or with water of unknown quality. Only potable water should be used.

Ideal Applications...

- Drinking Water
- Refrigerator Water Dispensers
- Restaurants & Hotels
- Ice Making Machines
- Solution Mixing Systems
- Plant Nurseries
- Coffee Machines
- Senior Citizen & Nursing Homes
- Hospitals & Pharmacies

The Ultimate R.O. System

Reo-Pure Systems are durable and compact enough to fit neatly under the kitchen sink or any place more convenient for you.

Every system is equipped with a pressurized storage tank, 10" full-size sediment and carbon filters, and an automatic shut-off valve to turn off the system when the storage tank is full. Three models to choose from: 3-Stage, 4-Stage, and 5-Stage, ranging in size from 25 gallons per day to 100 gallons per day.

Your Reo-Pure Sales Representative will take the guesswork out, by recommending the R.O. system that is best suited for your home or business. All Reo-Pure Systems are covered by a one year limited warranty.
